The Planning & Infrastructure department has drafted this spatial blueprint to guide the second phase of the village center accessibility upgrades. This forward plan addresses the expansion of pedestrian pavements, the installation of high-efficiency LED smart street lighting, and the integration of sustainable urban drainage systems.

Designers have prioritized barrier-free paving textures to ensure that the public space remains fully accessible to individuals using mobility aids. The executive team expects to publish the detailed technical blueprints in the document library early next month for public appraisal.

A formal tendering window will follow, inviting qualified civil engineering contractors to submit competitive bids that balance value with minimal localized disruption. Cabinet members are scheduled to debate the final contract award during the autumn legislative session. This major infrastructure overhaul aims to increase footfall for local independent retailers while modernizing the parish’s arterial infrastructure.The Planning & Infrastructure department has drafted this spatial blueprint to guide the second phase of the village center accessibility upgrades.
